

GOBLIN™ is an improvement of NATAB™ - the predecessor to the Predator series.

GOBLIN™ Grease Eater

NATAB™ was the predecessor to the Predator series. This includes the Jaws™ and Hammerhead™. They both became revolutionary in the market and are widely used today all over the world. Since then we have improved the NATAB™ Nozzle into GOBLIN™ Grease Eater.

GOBLIN™ has water bearing walls to ensure smooth water streams with less turbulence. By this construction the water's energy is kept until it becomes useful for cleaning the pipes. GOBLIN™ is about twice as effective as conventional nozzles with a drilled interior.

We know that our nozzles have been used for copying, but if you don't have the knowledge about cooperating factors such as flow rates, pressure and design of nozzles, you will not succeed.

GOBLIN™ has 10 exchangeable jets; half of them with 30 degrees angle and the other half with 15 degrees, to fit customer's flush pumps and hose dimensions. The jets used on the Jaws™ Nozzle are used on GOBLIN™. There is also a front hole, which can be plugged when not in use.

GOBLIN™ is made in quality stainless steel with 1 ¼" BSP or NPT connecting thread as standard.

| Specifications GOBLIN™ | |
|------------------------|----------------------------------|
| Hose size | 3/4" up to 1 1/4" |
| Flow rate | 100 – 1000 l/min (30-250 US GPM) |
| Pipe size | Ø 6" and up, Ø 150 mm and up |
| No. of jets | 10 + 1 |
| Jet size | 1.9 - 6.0 mm |
| Weight | 12lbs |
| Length | 7 1/2" |
| Diameter | 4" |

Note: Weights and dimensions are approximate and subjects to change without notice.

| Art no. | Description |
|---------|--|
| 2-NII01 | GOBLIN™ incl. 10+1 jets. Hose connection adjusted to your needs. |
